**HL18RW****ULTRALIGHT HEADLAMP
ESORTS LONG-DISTANCE TRIP**

500 lumens maximum output

One 1300 mAh li-polymer battery pack or 3 AAA

(English) Fenix HL18RW Headlamp

- Cree XP-G S3 and Everlight 2835 white lights, with lifespan of 50,000 hours.
- Uses 1300 mAh Li-polymer battery pack, compatible with 3 AAA Manganese batteries (charging included).
- Ultralight standby current 1μA, reduces battery leakage with dry cell inserted.
- Lockout function.
- Dual switches for easy and fast operation.
- Three spotlight and two floodlight output levels, SOS.
- Micro USB charging port, 5V/1A.
- Battery level indication.
- 60° tilt mechanism directs the beam where needed.
- IP66 rated protection.
- Material: high quality plastic and aluminum, three times injection molding process gives O-ring.
- 2.27" x 1.67" x 1.46" / 57.7 x 42.3 x 37 mm
- 8.82 oz / 80 grams (including battery & headband)

Operating Instruction ①**Switches**

Spotlight switch: for on/off mode switching, lockout function and output selection on spotlight mode.

Floodlight switch: for on/off mode switching , lockout function and output selection on floodlight mode.

On/off: Press and hold either of the two switches for 0.5 seconds to turn on the lamp. Corresponding low output level is selected by default.

Press and hold either of the two switches for 0.5 seconds to turn off the lamp.

Mode Switching: With the lamp switched on, single click either of the two switches to reach the corresponding mode.

Output Selection: Spotlight mode: Single click the spotlight switch to cycle through Low-Med-High. Floodlight mode: Single click the floodlight switch to cycle through Low-Med-High.

Lockout Function: Lock: With the lamp switched off, press and hold either of the two switches, or simultaneously press the two switches for 3 seconds, the lamp will blink twice to indicate locked status.

Boot-up Battery Level Indication ③

The indicators will display the battery status for 3 seconds each time the lamp is switched on. With the lamp switched off, the indicators will display the battery status for 1 second. Once again the lamp will go off immediately, or without any delay, if the battery status last for 3 seconds.

Intelligent Protection:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Charging ②

Operation:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The above specifications are the test results given by Fenix through laboratory testing using one 1300 mAh Li-polymer battery pack and three PARDEER AAA manganese batteries. The temperature of 21.5°C ± 5°C may account to different working environments and the actual battery used.

*The high output is measured in total of runtime including output at reduced levels due to temperature or protection mechanism in the design.

Waterproof:

The waterproof specification is the test results given by Fenix through laboratory testing using one 1300 mAh Li-polymer battery pack and three PARDEER AAA manganese batteries. The temperature of 21.5°C ± 5°C may account to different working environments and the actual battery used.

*The lamp will accumulate a lot of heat when used on High output level for extended periods. The lamp will automatically step down by a few lumens to reduce temperature.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.

Note: The headlamp can only be used on Low output when charging.

Impact Resistance:

Uncover the anti-dust cap and plug the Micro USB side of the charging cable into the charging port of the lamp. The four output levels will be automatically adjusted. The total charging time is about 2.5 hours with the lamp being switched off.
