### Operation

#### 1) Battery check: Every first action of the turn-on

Blue: internal Li-po battery

Green: external AAA battery

#### 2) Battery switch (manually)

**At the moonlight mode, rapid triple click or above**

2.1 Switch successfully

From Li-po to AAA: the Green indicator will come on for 3 seconds

From AAA to Li-po: the Blue indicator will come on for 3 seconds

2.2 Switch failed

From Li-po to AAA: the Blue indicator will flash for 3 seconds

From AAA to Li-po: the Green indicator will flash for 3 seconds

#### 3) Automatically switch battery

3.1 AAA battery installed, it will use that battery for power supply.

3.2 One of the battery is low (Lipo <3.0V, AAA <0.8V), it will switch to the other battery to work.

#### 4) Lockout/Unlock: From off, rapid quad click;

When locked, the Blue indicator (Lipo) will flash 3 seconds after any action applied,

When unlocked, the Green indicator (AAA) will flash 2 seconds.
